Background

Functional component of the Nogo receptor signaling complex(RTN4R/NGFR) in RhoA activation responsible for some inhibition of axonal regeneration by myelin-associated factors(PubMed:14966521, PubMed:15694321). Is also an important negative regulator of oligodentocyte differentiation and axonal myelination(PubMed:15895088). Acts in conjunction with RTN4 and RTN4R in regulating neuronal precursor cell motility during cortical development(By similarity).
